List of Figures

Figure 1 Cool smiley I found in "../graphics/" ! 3

Abbreviations

***NGL* – Not gonna lie**

1 The HHI Template

This template is structured so that all project-specific values live in `overview.typ`, while `main.typ` wires the document flow and includes chapter files.

Also check out `introduction.typ`, to see how the following chapter was implemented

2 Basic functionality

2.1 Compile The Thesis

Use the following command for a one-time PDF build:

```
typst compile main.typ thesis.pdf
```

Use watch mode during writing so the PDF updates automatically after each save:

```
typst watch main.typ thesis.pdf
```

2.2 Create And Add Chapters

Create a new chapter file in the `chapters` folder Add them to `main.typ` in the desired order with `#include "chapters/XX_chapter-name.typ"`.

2.3 Use Abbreviations

Abbreviations are defined and registered in `abbreviations.typ`.

Example entry (already present):

```
(
  key: "ngl",
  short: "NGU",
  long: "Not gonna lie",
),
```

Reference an abbreviation in text with `@key`, e.g. `@ngl`.

2.4 Use References

Bibliography entries are stored in `bibliography.bib` and rendered automatically at the end of the thesis from `main.typ`.

To cite in text, use the citation key with `@key`, e.g. `@Upper1974`.

2.5 Minimal In-Text Example

This sentence demonstrates both systems together: Not gonna lie (NGL) can be referenced like a glossary entry, and literature can be cited directly with [1].

2.6 Cross references

Almost all elements in typst can be cross referenced using the `@key` syntax, just add a `<name>` to the element in question and reference it with `@name`. For example: Section 2.4 and Figure 1

2.7 Other things

Of course, this template allows for images, which can be added to the `graphics` folder and in cluded in chapters with `figure("graphics/image.png")`. For tables, use the `table` environment. For code listings, use the `raw` environment with the appropriate language for syntax highlighting, e.g. `raw("python")`.

Figure 1: Cool smiley I found in "../graphics/" !

Dont forget to save often and have fun!
